Professional Summary

Backend Software Engineer with 1+ year of experience at Cisco building scalable Java/Spring Boot microservices and low-latency REST APIs. Experienced in distributed systems, event-driven architectures using Kafka, and AWS-based backend services. Strong background in database optimization, concurrency control, and transaction management with focus on high-throughput backend systems.

Technical Skills

Languages: Java 8/11/17 J2EE, Python, JavaScript, TypeScript
Backend: Spring Boot, Spring MVC, Spring Data JPA, REST APIs, Microservices
Distributed Systems: Apache Kafka, Event-Driven Architecture, Asynchronous Processing
Databases: PostgreSQL, MySQL, SQL Server, Query Optimization, Indexing
Cloud & DevOps: AWS, Docker, Jenkins, CI/CD, Git, Linux
Generative AI: GitHub Copilot, ChatGPT, Gemini, AI-assisted code generation, prompt engineering
Engineering: SOLID Principles, Design Patterns, OOAD, Agile, JUnit, TDD, Grafana, Kibana

Professional Experience

Software Engineer

Aug 2024 – Aug 2025

Cisco Pvt. Ltd., Bangalore, India

Full-Time

- Winner of WebEx Playtime Hackathon; developed production-grade Java/Spring Boot microservices using Hibernate, JPA and REST APIs following SOLID principles
- Implemented transactional service boundaries using **@Transactional** and secured APIs with OAuth2 and JWT ensuring data consistency and authentication
- Designed backend services handling concurrent API requests with robust error handling, rate limiting, and observability using Grafana and Kibana to ensure production reliability
- Optimized database schema and indexing strategies reducing P95 API latency by 35% under production workloads
- Built Docker-based CI/CD pipelines (Jenkins, Maven, Artifactory) improving deployment speed by 40% and used Grafana/Kibana for production monitoring and debugging
- Leveraged Generative AI tools (Copilot, ChatGPT, Gemini) to assist in code generation, API documentation, debugging workflows, and automated test case creation improving developer productivity and accelerating feature delivery

Key Projects

PayFlow – Distributed Payment & Ledger System — Java, Spring Boot, Kafka, PostgreSQL

2026

- Designed event-driven payment architecture using Kafka separating API ingestion from asynchronous transaction processing
- Implemented idempotent consumers with ACID-compliant double-entry ledger ensuring financial correctness under concurrent workloads
- Built reconciliation services validating ledger integrity and preventing duplicate transactions

JiraX AI – AI Project Management Engine — React, FastAPI, Google Gemini 3.0, Java Spring Boot

2026

- Built AI-powered project management prototype automating GitHub repository analysis and sprint planning
- Designed migration roadmap from monolith to microservices using Spring Boot backend and Python for AI inference
- Developed REST APIs orchestrating AI inference and repository analysis workflows
- **Live Project:** [LIVE LINK](#)

Education

Bachelor of Engineering in Computer Science

2023

College of Engineering & Technology, Akola

CGPA: 8.42/10

Certifications & Achievements

Certifications: Cisco DevNet Associate — CCNA — Cloud Computing (Coursera) — Full Stack Java Development

DSA: Solved 300+ problems across LeetCode, GeeksforGeeks, HackerRank

Languages: English, Hindi, Marathi

Additional: Indian Citizen — Immediate joiner — Open to relocate to Bangalore

Hackathons

Cisco WebEx PlayTime

2025

Participated in an internal Cisco WebEx hackathon focused on exploring innovative solutions for improving video and audio streaming experiences in collaboration platforms.

Google Gemini DeepMind DevPost

2026

Built an AI-powered project management prototype leveraging **Google Gemini** to automate GitHub repository analysis, generate sprint planning insights, and assist development teams using generative AI-driven workflow automation.
